

**CATrak Technologies' Next generation anti-theft solution
Leads to Arrest of Catalytic Converter Thief in Montreal Canada.**

The US-based company announced today that their tracking system led to the arrest of a thief in the area who was attempting to steal a catalytic converter. This incident is a testament to the effectiveness of CATrak Technologies' patented next-generation anti-theft solution in protecting vehicle fleet owners from financial losses and maintaining the operations of their vehicles.

The incident occurred when the Fleet Manager of one of our Autobus' customer in Montreal received a text message from CATrak's anti-theft system notifying them of a theft. The owner had installed CATrak's system on their vehicle, which alerted them of the theft in progress. The owner then contacted the authorities and provided them with the location information provided on CATrak's app.

Within hours of receiving the location alert, law enforcement officials were able to locate the thief and obtain a search warrant before the stolen catalytic converter could leave the area. The stolen converter was recovered, ensuring that the fleet owner did not suffer financial losses more than 15 000 \$ because of the theft.

"We are thrilled to hear that our solution played a crucial role in the arrest of this thief," said Jean Poulin, President of OLIJEL, CATrak Technologies, Inc. exclusive distributor in Canada.

"Our system is designed to provide vehicle fleet owners with peace of mind and real-time alerts when their catalytic converters are at risk of being stolen. This incident is a testament to the effectiveness of our technology in combating this growing problem.

CATrak Technologies' tracking system is designed to be fitted to any make or model of vehicle. The system utilizes advanced technologies to track the location of the catalytic converter in real-time, alerting the owner immediately if any unauthorized tampering or removal occurs.
